

Up to 50% Funding with the LCBP Phase 2 Grant Scheme

Filsol's solar energy systems and nationwide network of installers are fully accredited under the terms of the Low Carbon Buildings Programme (LCBP) Phase 2 scheme. This means our solar water heating and solar photovoltaic (PV) systems are subject to grants of up to 50% of the total purchase and installation costs.

New Money for LCBP Phase 2

Following the Budget announcement on 22 April 2009, an additional £35 million of funding has been allocated to the LCBP Phase 2 scheme. As a result the current programme is being extended from 1 July 2009 until April 2011.

The LCBP Phase 2 scheme provides capital grant funding for the installation of various microgeneration technologies - including solar water heating and solar PV - by organizations in the UK public and not-for-profit sectors, including housing associations, local authorities, schools, colleges, universities, hospitals, public service organisations and registered charities.

Grant Application Service

Filsol provide a full grant application service to assist in securing the maximum funding available through LCBP Phase 2, as well as any other grant schemes at both national and regional levels.

Filsol are the lead partner in the Solar Microgeneration Limited (SML) consortium who have been appointed by the Government as a 'Framework Supplier' under the Low Carbon Buildings Programme (LCBP) Phase 2 scheme.

Since the launch of the LCBP Phase 2 scheme in December 2006, SML has emerged as the UK's leading provider of solar water heating systems to housing associations, RSLs and the public sector. Accounting for over 65% of the total LCBP Phase 2 funding available for solar water heating, Filsol solar collectors have been specified for over 60 social housing schemes and on more than 50 public sector buildings across the UK. Total grant funding allocated to SML projects is expected to reach more than £3 million by June 2009.
